FOR IMMEDIATE RELEASE

TETCO Geothermal Announces All New R-410A Product Line

Greenville, IL – July 29, 2009 TETCO® Geothermal, a division of Enertech Manufacturing, LLC, announces the introduction of the ESIII series of R-410A geothermal heat pumps. The ESIII series will replace all previous R-22 models, and will be produced in Enertech’s Mitchell, South Dakota plant starting at the end of August.

TETCO (Thermal Energy Transfer Company) was founded in 1977, making it one of the first residential geothermal brands marketed in the United States. Enertech Manufacturing, LLC purchased TETCO earlier this month as part of an expansion plan, which includes doubling the square footage of the South Dakota manufacturing plant.

The new ESIII series consists of geothermal vertical packaged units, split system compressor section models, matching air handlers and “A” coils for split systems, and water-to-water units. All ESIII series water-to-air equipment is AHRI certified and meets Energy Star® requirements. Vertical and split units come standard with Copeland UltraTech® scroll compressors; water-to-water heat pumps include Copeland single speed scroll compressors. All units are standard with microprocessor controls, DSH feature (desuperheater) with internal heat exchanger/pump, and durable Galvalume® cabinets. The vertical packaged heat pumps are standard with ECM variable speed fan motors and stainless steel drain pans.

As part of the ESIII product introduction, new sales and technical literature will be posted on the website at www.tetco-geo.com in the next few weeks. GeoAnalyst® energy analysis and loop
